Every day in the United States, an average of 2,000 teenagers use prescription drugs without a doctor's guidance for the first time. Youth who abuse prescription medications are also more likely to report use of other drugs.

Prescription opioid pain medications such as Oxycontin and Vicodin have effects similar to heroin when taken in doses or in ways other than prescribed, and research now suggests that abuse of these drugs may open the door to heroin abuse because heroin is cheaper and easier to obtain than prescription opioids.

Wisconsin information

More teens abuse prescription drugs than any illicit drug except marijuana. In 2013, 14.9 percent of high school students in Wisconsin report taking prescription drugs without a doctor's prescription during their lifetime, compared to 18.1 percent in 2011.

(U.S. Centers for Disease Control Youth Risk Behavior Survey, 2011)
